NOAA and NOAA Partnership Stations Relative to the Storm

## Storm Analysis

As of 06/20/2017 23:00 CDT, water levels along the central Gulf of Mexico coast are elevated and range between 0.70 to 3.80 ft above normal tide levels. The highest water level residuals at this hour are being observed at Pilottown, LA, Bay Waveland Yacht Club, MS and Shell Beach, LA where water levels are running consistently greater than 2 ft above tide predictions. The highest winds are being observed along the coasts of southeast Louisiana, Mississippi and Alabama where in the last few hours winds have gusted between 30 and 40 knots.

Barometric pressure continues to fall gradually across the region.

Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.
